Show all work in a logical, vertical sequence. Remember that your process and notation are worth points too, not just your answer. You must communicate your results properly, not just attain them.

10. For the following functions,

 $f(x) = \sqrt{x+5} - 4$, $g(x) = \sqrt{-x+9}$, $h(x) = x^2 - 2x - 15$ answer the following questions.

(a) Set up and simplify the **equation** for the function K(x) = g(h(x)), and then find the domain of K(x) by sketching a graph of your radicand. *Be careful to use parentheses when substituting in for x, so that you may distribute any necessary values* Show the work, including the graph, that leads to your answer. Give your domain in either proper set or interval notation.

(b) Set up the **equation** for the function $R(x) = \frac{2x-10}{h(x)}$. Determine the equation and/or coordinates (x, y), of any vertical asymptotes and holes, respectively. Show the work that leads to your answer, and use proper notation.
